

The small vertical fins can be rotated to run flush, or leave a gap against the back panels. Objects can be stored in this gap, or it can be left clear to allow for cable management

Two units can be joined together to create further storage space.

Assembly Instructions

1

Identify the top, 3rd and bottom shelves. The bottom panel will have 4 feet inserted into its underside - the 3rd shelf will have an extra 2 holes at each end on its underside and the top will have no holes on its upper surface. All other shelves can be used in any order

If joining multiple units together - first use a screwdriver to insert 2x screws B into bracket C to join multiple bottom panels as shown below. Turn to the correct way up once completed.

2

Insert a narrow and a wide back panel into the bottom panel using 4x dowel A. They can be interchanged and moved horizontally across different positions to create a desired visual configuration.

Supplied							Required	
								
A x 80	B x 4	C x 2	D x 1	E x 1	F x 2	G x 1
