DAILY CLEANING

For dusting and light cleaning of the wooden surface use a soft, dry cloth. For further cleaning, use a soft cloth that is firmly wrung in clean water for gently wiping the surface, and then immediately use a dry cloth to wipe the surface again.

Do not use materials for maintenance that:

- Contain abrasive agents.
- Are basic, acidiferous or organic.

For the best maintenance of the product, protect it against sunlight and heat, and try to keep it away from moisture, grease and other dirt. Furthermore, protect the surfaces against sharp objects and others that might cause scratches.

REPAIRS AND MAINTENANCE

Strongly coloured fluids, like red wine and fruit juice need to be dried up immediately because they might stain the table. Deep dents and scratches in the wood can in most cases be repaired. These type of repairs should always be done by a professional carpenter.

Each new table has been treated by professionals and it should not need any extra treatment for the next 4 years, if it is taken care of. For smaller scratches and general refreshing of the table surface we recommend using acid free liquid paraffin oil. Clean the table before using the oil and make sure the surface is dry. Spread the oil with a clean cloth and let it absorb for 20 minutes. Then dry the remaining oil off the surface with a clean, dry cloth. This type of oil is not flammable.

DAGLIG RENGØRING

Ved aftørring og let rengøring af bordet, brug en blød, tør klud. For mere grundig rengøring, brug en blød klud hårdt vredet i rent vand. Brug derefter straks en tør klud for at tørre overfladen.

Brug ikke rengøringsmidler der:

- indeholder slibende rengøringsmidler
- er basiske, syreholdige eller organiske

For den bedste vedligeholdelse af produktet, hold det væk fra sollys og varme. Undgå så vidt muligt væske, fedt og andet snavs. Endvidere, beskyt overfladen mod skarpe genstande og andre ting som kan ridse bordet.

REPARATIONER OG OPFRISKNING AF BORDET

Stærkt farvede væsker såsom rødvin og frugtsaft skal fjernes med det samme for at undgå misfarvning af træet. Dybe hakker og ridser kan i de fleste tilfælde repareres. For disse typer skader anbefaler vi altid at bruge en professionel snedker.

Et nyt bord er behandlet af en professionel snedker og behøver ikke ekstra overfladebehandling i de næste 4 år, hvis det bliver behandlet forsvarligt. For mindre ridser og general opfriskning af bordets overflade anbefaler vi at bruge syrefri vaselinolie. Rengør bordet og lad overfladen tørre helt inden brug af olien. Spred olien ud over hele bordet og lad den suges ind i træet i 20 minutter. Tør derefter overfladen med ren, tør klud. Denne type olie er ikke brandfarlig.
