SAG

Designed by Nendo / Oki Sato

Sag, which can be used as a low table or stool, is a dynamic complement that fits naturally into any outdoor setting: gardens and terraces. Made of polyurethane and available in white or mud for outdoor use, Sag reinterprets the traditional stool with originality in a dynamic and fluid form.

[DISCOVER THE INDOOR VERSION](#)

STRUCTURE

Frame in stiff polyurethane, obtained through moulding, available in goffered matt white and matt mud. The polyurethane used, called TECH, is a structural and high-density material, which means it is highly shock-resistant, as well as scratch-resistant and resistant to ageing.

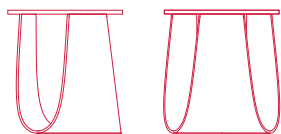

SEAT

The outdoor version is only available with polyurethane tops only, in white and mud colours. The polyurethane version is moulded in a soft integral polyurethane called Freeform (with plywood insert). The variants with frame and seat in polyurethane, are perfect in both indoor and outdoor environments.

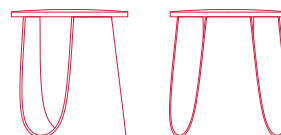

INDOOR VERSION

Available stool with bamboo top for indoor use only. The wood variant is composed of a bamboo veneered plywood panel, with narrow plank and evaporated finish.
