TRANSPARENCY 2.0

This product is the result of incessant research and innovation. Kartell was the first to use transparency in design and now, in a process of continuous evolution, is able to create its best-selling products and new concepts with a green version of polycarbonate as part of the “Kartell loves the planet” project.

It is a material that uses a renewable feedstock from the pulp and paper industry in the synthesis phase.

It is ISCC* certified, supporting the transition to a circular economy by ensuring traceability throughout the supply chain and enabling sustainable products to be sourced from any certificate holder.

The new polycarbonate 2.0 guarantees the structural and mechanical characteristics of the fossil feedstock and makes it possible to work on design and aesthetics without any restriction.
