KM05 Wire Stool

CEES BRAAKMAN

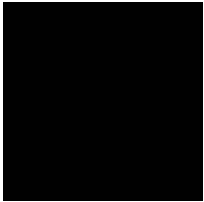

The Wire stool is a refined balance of lightness and strength. Its slender wire steel frame creates an airy, spacious feel, while the compact design fits seamlessly with dining tables and desks. Thanks to its thoughtful proportions and slightly curved seat, the stool offers surprisingly comfortable seating. Cees Braakman designed the stool during a period when international influences and new production techniques enriched Dutch design. The use of wire steel made it possible to create a strong, durable, yet elegant seating solution. The Wire stool is therefore not only a functional piece of furniture but also a subtle eye-catcher that effortlessly complements a wide variety of interiors.
