

1. The first step is to identify the problem.
2. The second step is to define the problem.
3. The third step is to analyze the problem.
4. The fourth step is to develop a solution.
5. The fifth step is to implement the solution.
6. The sixth step is to evaluate the solution.
7. The seventh step is to monitor the solution.
8. The eighth step is to maintain the solution.
9. The ninth step is to improve the solution.
10. The tenth step is to document the solution.

Hardware

Hardware is the physical components of a computer system that are used to store and process data.

Hardware components include the monitor, keyboard, mouse, and the internal components of the computer case.

Hardware components include the monitor, keyboard, mouse, and the internal components of the computer case.

Hardware components include the monitor, keyboard, mouse, and the internal components of the computer case.

Software

Software is the collection of programs and data that are used to control the hardware.

Software components include the operating system, applications, and data.

Software components include the operating system, applications, and data.

Software components include the operating system, applications, and data.

Network

A network is a collection of computers and other devices that are connected together.

Network components include the network interface card, network cable, and network switch.

Network components include the network interface card, network cable, and network switch.

Network components include the network interface card, network cable, and network switch.
