

LED Product Information and Warnings

Important

- **Always disconnect the power before installing or replacing bulbs and before cleaning or other maintenance.**
- **Consult a qualified, licensed electrician to ensure correct branch circuit conductor.**
- Please read all included assembly instructions and warnings carefully before installation. Contact Customer Service if you have any questions or concerns. Before installation, please confirm that the fixture is compatible with your supply voltage and dimming system, if present.
- LEDs are highly sensitive electronic devices, and must be treated with care. Do not open any factory sealed compartments, and avoid touching the LEDs with your hands or any object.
- Although all our fixtures are equipped with protective devices, LED fixtures are vulnerable to power surges and supply variations. Do not install LED fixtures on the same circuit as any motors, appliances, or HVAC systems.
- Do not remove or bypass any LED Driver or Transformer that is provided with the fixture, and do not replace or substitute with another power supply.
- Remote LED Driver or Transformer installation must be done by a licensed electrician and in accordance with local codes. Remote installations should be in an accessible location, as close to the fixture as possible.
- Fixtures must be wired in parallel on independent leads; do not "daisy chain" multiple fixtures together or wire them in series.
- All factory-made splices and connections must remain intact. LED circuits are carefully designed and built, and improper connections may damage the fixture.
- The ends of coaxial pendant cords have been precisely stripped and split at the factory and must not be field cut. Excess cord or cable should be neatly coiled and reserved in the fixture canopy.
- Any mounting hardware is provided for your convenience and should be used with discretion. Always use the appropriate hardware for the mounting surface.

Assembly Instructions

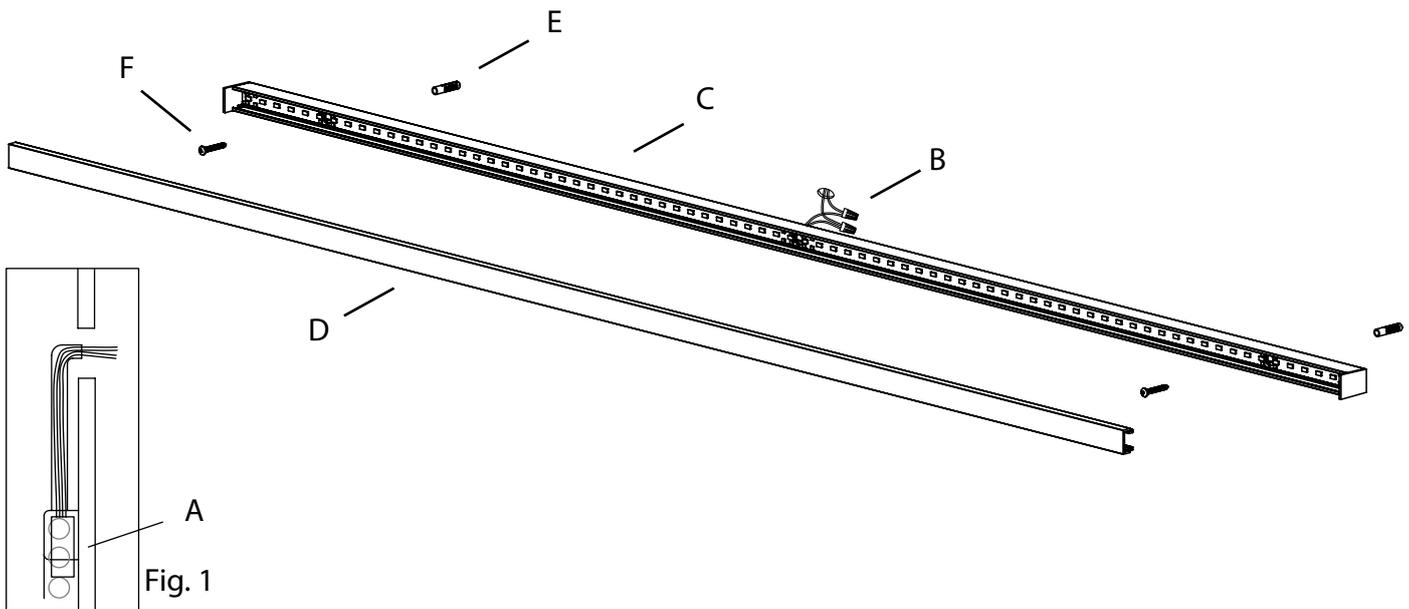

2790, 2791, 2792, 2794

INSTRUCTIONS D'INSTALLATION

Stix Plus Series - 4ft. LED Wall Bar, 5ft. LED Wall Bar, 6ft. LED Wall Bar, 8ft. LED Wall Bar

Important

- Always disconnect the power before installing or replacing bulbs and before cleaning or other maintenance.
- Consult a qualified, licensed electrician to ensure correct branch circuit conductor.
Consulter un électricien qualifié pour vous assurer que les conducteurs de la dérivation sont adéquats.

1. Shut off power to the branch circuit conductor.
2. The LED transformer (A) must be installed in a remote and accessible location near the fixture in accordance with local electrical code (Fig. 1). You must use the appropriate wire gauge from the transformer to the fixture to limit the voltage drop to less than 5%. Make appropriate electrical connections using wire nuts:
 - a. Connect the LED transformer's live wire (black) to the live supply wire.
 - b. Connect the LED transformer's neutral wire (white) to the neutral supply wire.
3. Drill a small hole (B) in the wall behind the fixture (C) and pull the low voltage transformer output wires through the wall.
4. Make appropriate electrical connections using wire nuts: Connect one of the fixture wires to one of the transformer output wires. Connect the other fixture wire to the second transformer output wire. Carefully push connections and extra wires back through the hole (B) in the wall.
5. Remove diffuser (D) from fixture (C). Attach the fixture to the wall with anchors (E) and screws (F) through the holes in the fixture. Snap the diffuser back into the fixture.
6. Restore power to the branch circuit conductor.

Note

- This fixture is dimmable with Electronic Low Voltage (Trailing-Edge) type dimmers only.

Care Instructions

- **Dusting:** Use a clean, dry cloth.
- **Cleaning:** To protect the finish, avoid any harsh abrasives or chemicals.
