

MONTE CARLO

CEILING FAN COMPANY

Owner's Guide and Installation Manual

3CLYR52/42XXXD-V1 Series Fan

UL Model NO. : 3CLYR52XXXD-V1 / 3CLYR42XXXD-V1

Attach sales receipt to this card and retain as your proof of purchase

DATE OF PURCHASE: _____

RETAILER NAME: _____

MODEL NUMBER: _____

RETAILER ADDRESS: _____

To register your fixture, please visit our website www.montecarlofans.com

3CLYR52XXXD-V1: 7.7 kgs/16.94 lbs
3CLYR42XXXD-V1: 6.7 kgs/14.74 lbs

Total fan weight with light kit

Cautions and Warnings

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING READ AND SAVE THESE INSTRUCTIONS

Installation work and electrical wiring must be done by qualified person(s) in accordance with applicable codes and standards (ANSI/NFPA 70-1999), including fire-rated construction.

Use this unit only in the manner intended by the manufacturer. If you have any questions contact the manufacturer.

After making the wire connections, the wires should be spread apart with the grounded conductor and the equipment-grounding conductor on one side of the outlet box and ungrounded conductor on the other side of the outlet box. The splices, after being made, should be turned upward and pushed carefully up into the outlet box.

WARNING: Before you begin installing the fan, servicing or cleaning unit, Switch power off at Service panel and lock service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

Be cautious! Read all instructions and safety information before installing your new fan. Review the accompanying assembly diagrams.

When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

Make sure the installation site you choose allows the fan blades to rotate without any obstructions. Allow a minimum clearance of 7 feet from the floor to the trailing edge of the blade.

WARNING: To Reduce The Risk Of Fire, Electric Shock, or Personal Injury, Mount To Outlet Box Marked "Acceptable for Fan Support of 15.9 kg (35 lbs) or less" And Use Mounting Screws Provided With The Outlet Box.

CAUTION: For Compliance with Local Codes and Regulations, If Installing The Secondary Support Safety Cable in the U.S., Do Not Remove Knockouts In The Outlet Box. Mount the secondary support safety cable through the reserved nail/screw hole on the outlet box to the building structure (or the ceiling joist).

WARNING: To reduce the risk of personal injury, do not bend blade holders during installation to motor, balancing or during cleaning. Do not insert foreign object between rotating blades.

Attach the mounting bracket using only the hardware supplied with the outlet box.

WARNING: To reduce the risk of fire or electric shock, this fan must be installed with an isolating wall control/switch.

WARNING: To reduce the risk of fire or electric shock, this fan should only be used with fan speed control part no. 7083R manufactured by Rhine Electronic Co., Ltd.

WARNING: To reduce the risk of fire or electric shock, do not use this fan with any other solid state fan speed control device, or variable speed control.

If this unit is to be installed over a tub or shower, it must be marked as appropriate for the application.

Never place a switch where it can be reached from a tub or shower.

The combustion airflow needed for safe operation of fuel-burning equipment may be affected by this unit's operation. Follow the heating equipment manufacturer's guideline safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE) and the local code authorities.

CAUTION: To Reduce the Risk of Electric Shock, Disconnect the electrical supply circuit to the fan before installing the light kit.

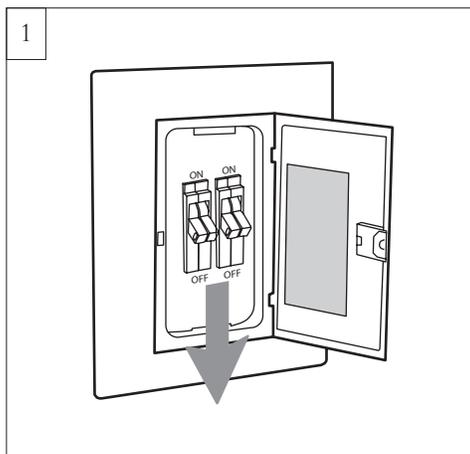

CAUTION: The light source is designed for this specific application and can overheat if serviced by untrained personnel. If any servicing is required, the product should be returned to an authorized service facility for examination or repair.

All set screws must be checked and tightened where necessary before installation.

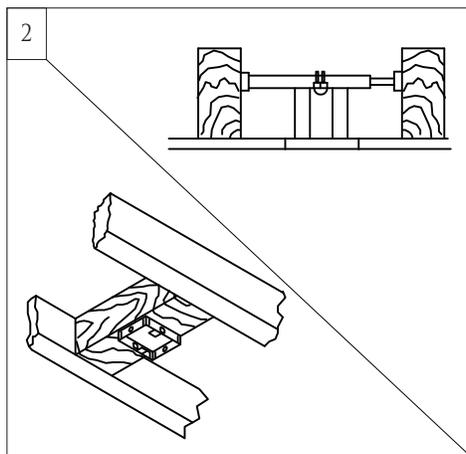

Tools Required for Assembly (not included): Electrical Tape, Phillips Screwdriver, Pliers, Safety Glasses, Stepladder and Wire Strippers

www.montecarlofans.com

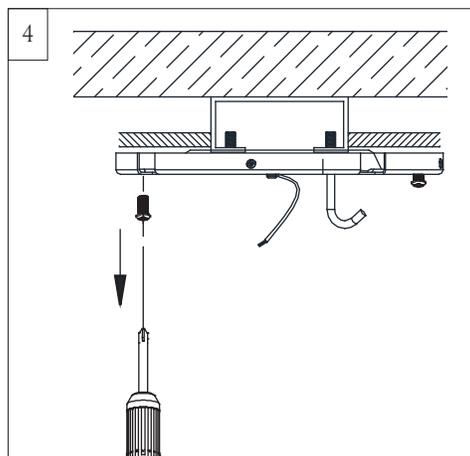

Before you begin installing the fan, Switch power off at Service panel and lock service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a warning device, such as a tag, to the service panel.

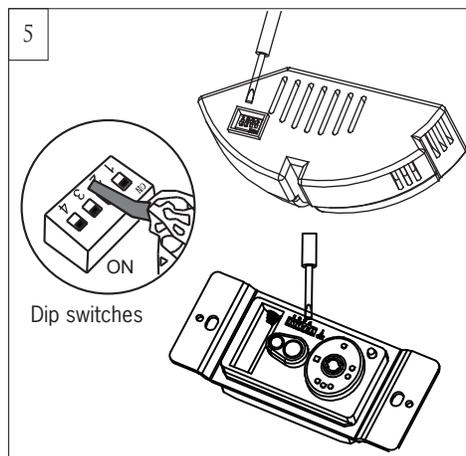

Before installing this fan make sure the outlet box is properly installed to the house structure. To reduce the risk of fire, electric shock, or personal injury, mount to outlet box or supporting system acceptable for fan support. (Mounting must support at least 35 lbs.)

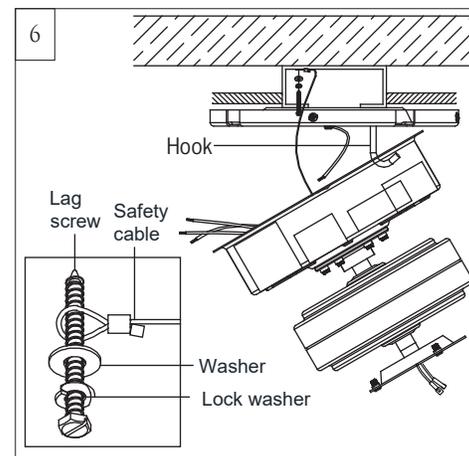

Use metal outlet box suitable for fan support and use only the screws provided with the outlet box (must support 35 lbs). Before attaching fan to outlet box, ensure the outlet box is securely fastened by at least two points to a structural ceiling member (a loose box will cause the fan to wobble). Remove the two outlet box screws provided with the box, aligning the holes of the mounting plate with the holes of the outlet box. Reinstall the 2 outlet box screws securely.

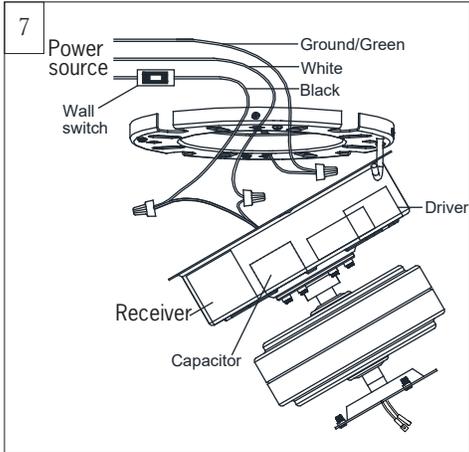

Loosen 2 screws across from each other and remove the other 2 preassembled screws from mounting plate (Corresponding to installation step 8). Save screws for later use.

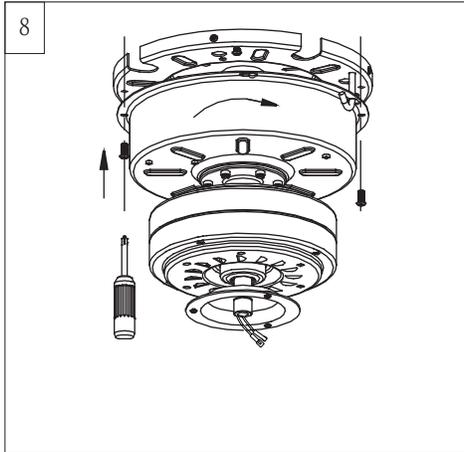

Set dip switches on the Remote Transmitter and Remote Receiver to the same settings. This must be done so the units will communicate properly. If you have other fans you can set to control from one Transmitter by setting receivers the same as the Transmitter. If you have more than one fan with remote, you can set the dip switches to different positions to have separate control.
Note: Remote receiver is located on the top plate of motor assembly as shown in the graphic of installation step 7.

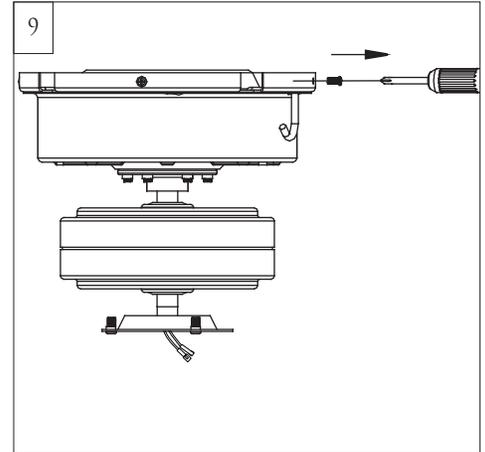

Hang motor assembly onto the hook on mounting plate for hands-free wiring and safety cable installation.
For Canadian installation and for USA fan and light kit combinations over 35 lbs, in both flush and downrod modes the safety cable must be installed into the house structure beams using 3" lag screws, washers and lock washers provided. Make sure that when the safety cable is fully extended the lead wires are longer than the cable and no stress is placed on the lead wires.
Note: If Installing The Secondary Support Safety Cable in the U.S., Do Not Remove Knockouts In The Outlet Box.

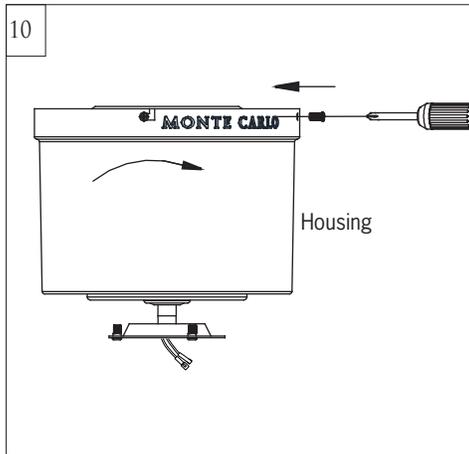

Make wiring connections using wire connectors provided as indicated above. White from house to White from remote receiver marked AC N. Black from house to Black from remote marked AC L. Connect all green grounded wires to Grounded wire from House. Make sure that no filaments are outside of the wire connector.

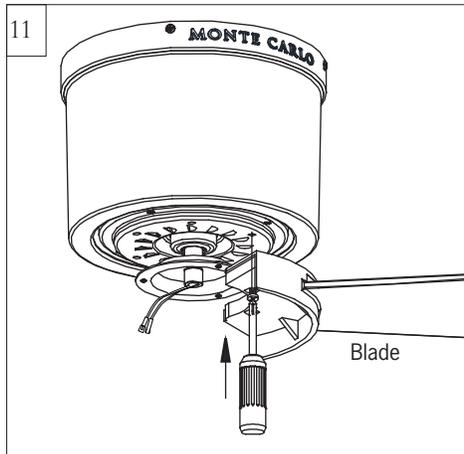

Lift motor assembly, aligning the keyhole slots with the preassembled screws on mounting plate, and twist clockwise till lock. Reinstall the screws removed in step 4. Tighten all screws securely.

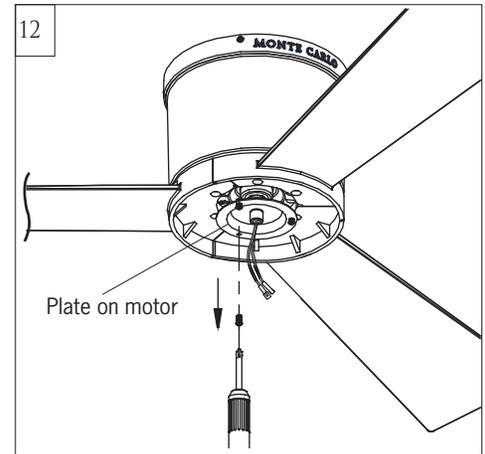

Loosen 2 screws across from each other and remove the other 2 preassembled screws from side of mounting plate (corresponding to installation step 10). Save screws for later use.

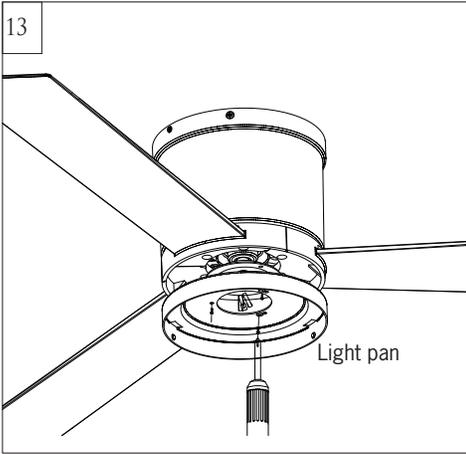

Attach housing onto mounting plate, aligning the keyhole slots on the housing with the screws on mounting plate and twist clockwise till tight. Reinstall the screw removed in step 9. Tighten all screws securely.

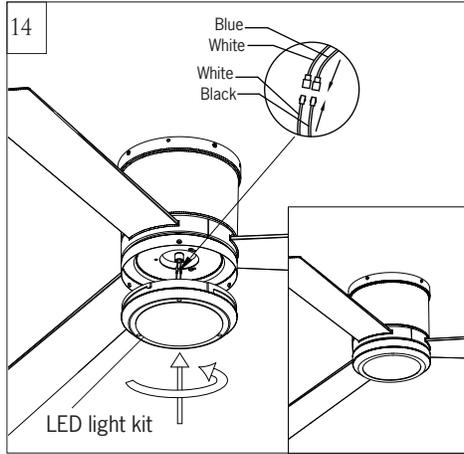

Install blade with screws provided, aligning each of the holes as shown and tighten all screws securely. Repeat this process for remaining blades.

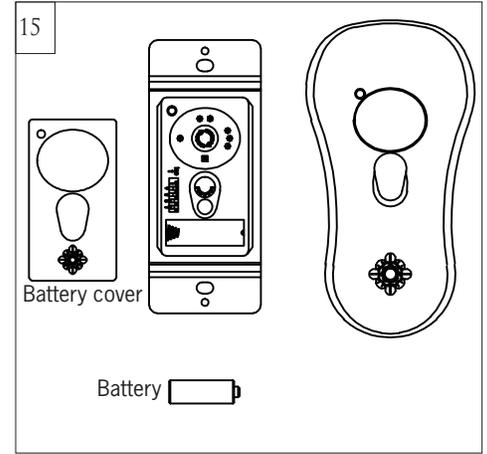

Loosen 2 and remove 1 preassembled screw from the plate on motor. Save screw for later use.

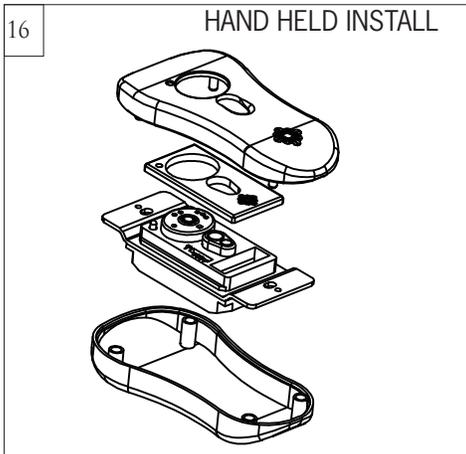

Attach light pan onto the plate on motor, aligning the keyhole slots on the light plate with the preassembled screws on the plate. Twist clockwise till lock. Reinstall the screw removed in step 12. Tighten all screws securely.

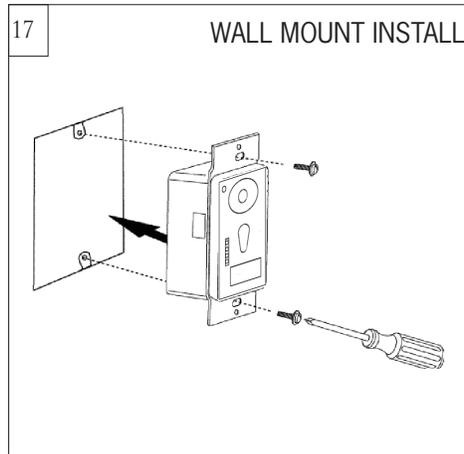

Connect white wire from fan to white wire from LED light kit and then connect blue wire from fan to black wire from LED light kit. Attach LED light kit to light pan by locating dimples in light pan with grooves on the LED light kit and twist clockwise until tight.

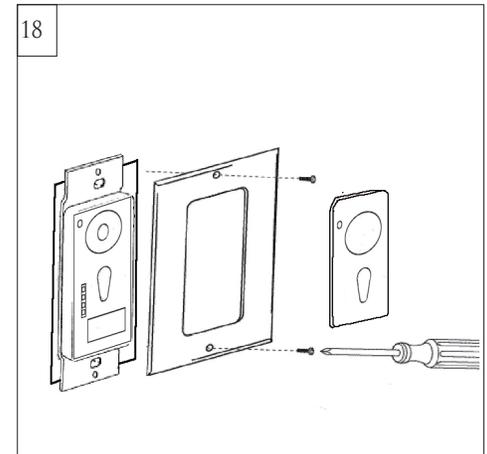

Remove battery cover. Install 12V battery into wall remote. Duracell MN21 / Eveready A23 / GP 23A all 12V. Attach cover of remote by placing over buttons and snap the battery cover in place.

Place battery cover over battery compartment and buttons. Place remote over 2 pins on front cover. Attach cover of remote by placing over 4 pins and snapping into place.

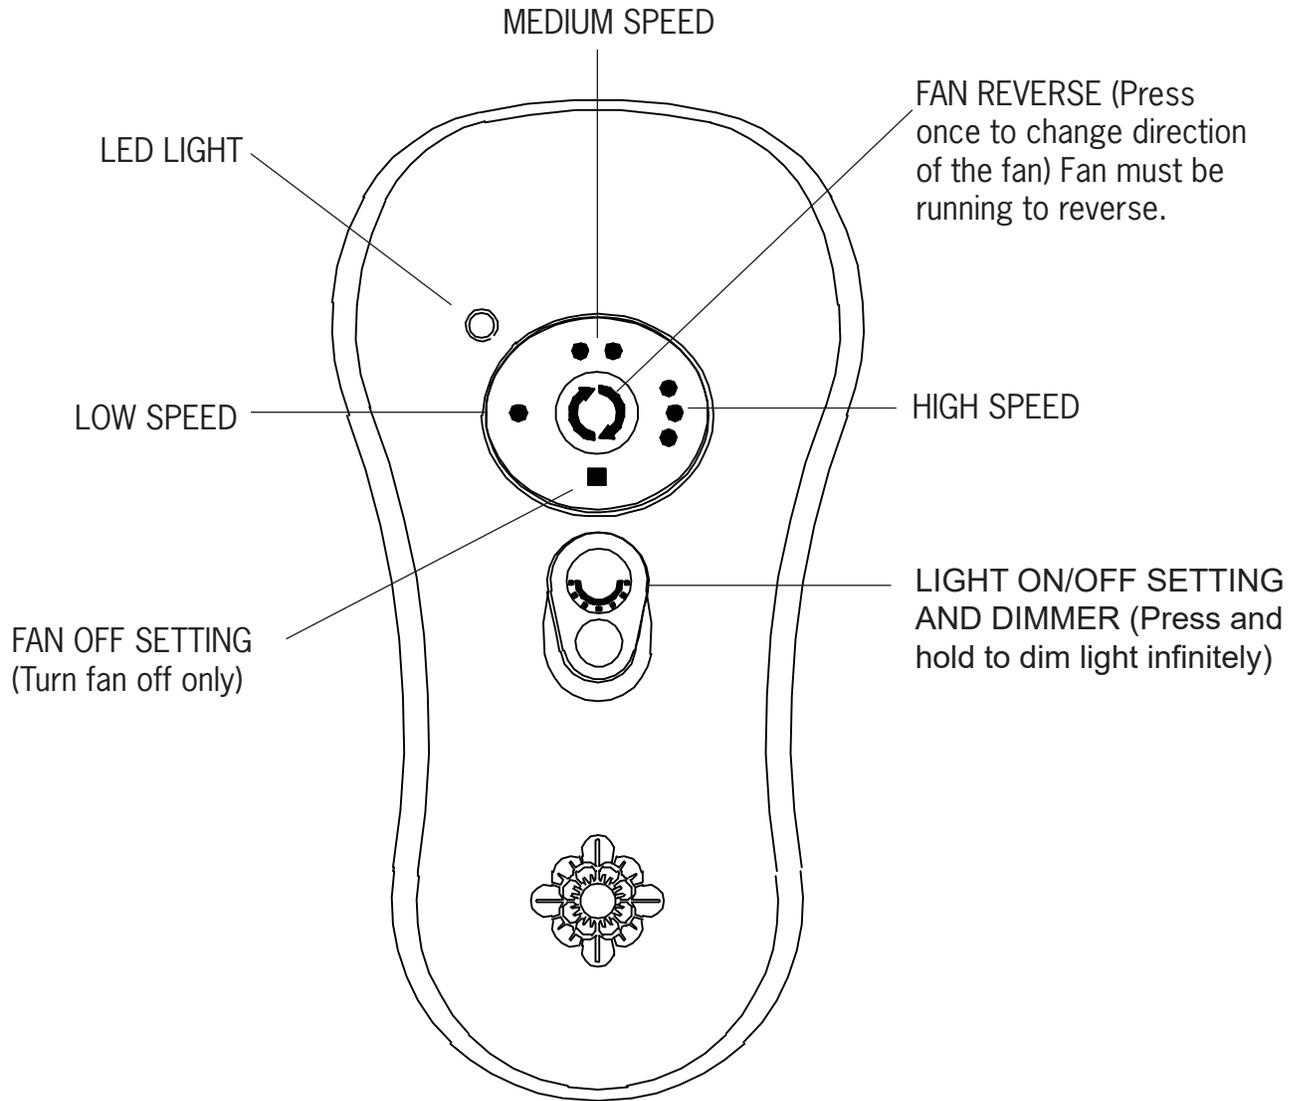

Install wall control unit to outlet box using machine screws provided.

Attach front cover to wall control unit with screws provided. Snap battery cover in place

Remote Control Transmitter Features

FAN SPEED: Depress “1 dot” for low speed, “2 dots” for medium or “3 dots” for high. To turn fan off press square”.

LIGHT DIMMER: To turn light on, press light dimmer once quickly. To turn off press once quickly while light is on. To dim light hold down button “light dimmer”. The light will cycle from bright to dim to bright until button is released. Light will maintain last setting if turned off.

FORWARD/REVERSE: Depress reverse button with fan running. Allow a few seconds for fan to slow down and change rotation direction. Clicking noise may be heard after depressing button.

Note: If not using for long periods of time, remove battery to prevent damage to remote transmitter, and store the remote transmitter away from excess heat or humidity

Trouble Shooting

If you have difficulty operating your new ceiling fan, it may be the result of incorrect assembly, installation, or wiring. In some cases, these installation errors may be mistaken for defects. If you experience any faults, please check this Trouble Shooting Chart. If a problem cannot be remedied, or you are experiencing difficulty in installation, please call our Customer Service Center at the number printed on your parts list insert sheet.

Warning: Before servicing or cleaning unit, Switch power off at Service panel and lock service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

Trouble	Suggested Remedy
1. If fan does not start:	<ol style="list-style-type: none">1. Check main and branch circuit fuses or circuit breakers.2. Check line wire connections to fan and switch wire connections in switch housing. <p>CAUTION: Make sure main power is turned off.</p> <ol style="list-style-type: none">3. If this fan uses manual forward/reverse switch, make sure the switch is pushed firmly either way. Fan will not operate when switch is in the middle.4. If this fan uses remote controller, make sure dip switches are setting properly and make sure battery is effective.
2. If fan sounds noisy:	<ol style="list-style-type: none">1. Check to make sure all screws in motor housing are snug (not over tightened).2. Check to make sure the screws which attach the fan blade holder to the motor are tight.3. Check to make sure wire nut connectors in switch housing are not rattling against each other or against the interior wall of the switch housing. <p>CAUTION: Make sure main power is turned off before entering switch housing.</p> <ol style="list-style-type: none">4. Check to be sure light bulb is tight in socket and not touching the glass shade.5. Some fan motors are sensitive to signals from Solid State variable speed controls.6. Allow "break-in" period of 24 hours. Most noises associated with a new fan will disappear after this period.
3. If fan wobbles:	<ol style="list-style-type: none">1. If this is a downrod mount fan, make sure the ridge on mounting bracket engages the notch in the downrod ball.2. Make sure that canopy, mounting bracket or mounting plate are tightened securely to ceiling junction box and junction box is mounted firmly to ceiling joist.3. Check that all blades are screwed firmly into blade holders.4. Check that all blade holders are tightened securely to motor.5. Most fan wobble problems are caused when blade levels are unequal. Check this level by selecting a point on the ceiling above the tip of one of the blades. Measure this distance from blade tip to ceiling. Keeping measure within 1/8", rotate the fan until the next blade is positioned for measurement. Repeat for each blade. If all blade levels are not equal, you can adjust blade levels by the following procedure. To adjust a blade tip down, insert a washer (not supplied) between the blade and blade holder at the screw closest to the motor. To adjust a blade tip up, insert washer (not supplied) between the blade and blade holder at the two screws farthest from the motor. Reverse the position of the washer if blades mount from top of blade.6. If blade wobble is still noticeable, interchanging two adjacent (side by side) blades can redistribute the weight and possibly result in smoother operation.
4. If light does not work:	<ol style="list-style-type: none">1. Check blue wire from fan to make sure it is connected to hot wire from house.2. Check for loose or disconnected wires in fan switch housing.3. Check for loose or disconnected wires in light kit.4. Check for faulty light bulb and make sure bulb is tight in socket.5. Remove light kit and check the plug connections if they are present.6. If this fan uses remote controller, make sure dip switches are setting properly and make sure battery is effective. <p>CAUTION: Make sure main power is turned off before entering switch housing and/or canopy.</p>
